PROFESSIONAL SUMMARY

GenAI Professional currently architecting the AI core for India's first unified sports ecosystem. Expert in building production-grade Multi-Agent Systems, RAG Architectures, and scalable cloud infrastructure (Azure, OCI, AWS). Proven track record of deploying autonomous, governance-first AI solutions across Sports Tech, Trade Finance, and Logistics to drive operational excellence and global competitive advantage. My purpose is to deliver end-to-end, production-grade AI solutions that provide a definitive competitive edge in the World's technology sector.

PROFESSIONAL EXPERIENCE

AI Engineer Intern Jan 2025 - Present
SporTech Innovation Pvt. Ltd Pune, Maharastra

- Designing the architectural roadmap for "India's First Game Engine", a strategic government-backed initiative; architecting a centralized Multi-Agent System (MAS) where a single intelligent Orchestrator governs 6-9 specialized AI agents to automate rule enforcement, content generation, and national-scale analytics.
- Architected a fault-tolerant, high-concurrency Bulk Operations Engine for the "**LevelUp**" national portal with the association of **IDGES** (Indian Digital Gaming & Esports Society**)** and **CII** (Confederation of Indian Industry) to seamlessly process batches of 50,000+ concurrent user registrations; implemented state-driven access management, automated unique SPID generation, and asynchronous queueing for large-scale email/SMS dispatch.
- Developed a serverless Dynamic Certificate Engine utilizing Next.js and server-side HTML overlays, automating the logic to differentiate between merit and participation tiers; successfully generated and delivered 5,200+ verifiable credentials with sub-second latency, eliminating all manual administrative overhead.

Software Engineer Intern May 2025 - July 2025
Infosoft LLC Colorado, US

- Engineered an AI-driven validation workflow for an enterprise chatbot, automating the testing of 150+ user conversational flows and reducing manual validation efforts by over 30% using Python and Dialogflow.
- Initiated, designed, and led the development of 'Selector Detector' - a novel automation tool that proactively identifies UI breakages in dynamic React/Vite applications, reducing QA debugging time from 40+ hours into just one command.
- Managed and optimized CI/CD pipelines using Jenkins and Docker, automating build and deployment cycles to accelerate the agile development process.

KEY PROJECT

SmartTradeX - Autonomous AI Supply Chain Enforcer [Link] - **Present**

- Business Impact: Addressed financial losses in logistics by creating a self-healing microservices platform that autonomously halts transactions during critical hardware failures.
- Technical Implementation: Deployed a self-healing microservices platform using Python, Docker, and MQTT. Deployed Edge AI for real-time anomaly detection and implemented LangGraph multi-agent workflows (Logistics to Compliance to Finance) to autonomously validate contract terms.
- Result: Reduced incident response time to <200ms. The system now autonomously halts financial transactions ("Block Payment") during critical hardware failures, effectively preventing asset loss without human intervention.
- Future: Integrating Ethereum Smart Contracts (Solidity) to move the "Payment Block" logic on-chain for immutable trust.

LevelUp National Portal (in association with CII & IDGES) – High-Concurrency Registration Engine [Live app]

- Situation: A high-profile national sports event required a fault-tolerant registration ecosystem capable of handling unpredictable, massive surges in web traffic without experiencing database locks or data collision.
- Technical Implementation: Engineered an event-driven micro-backend utilizing concurrency-locking mechanisms to serialize concurrent requests, coupled with a robust Node.js bulk-operations pipeline for processing large-scale asynchronous user queues.
- Result: Achieved zero data corruption under concurrent user loads, completely automated the generation and dispatch of unique Registration IDs (SPIDs), and eradicated manual administrative overhead for thousands of participants.

Selvenza - End to End Selector Automation Tool [Link]

- Business Impact: Eliminated the "UI Flakiness" bottleneck that cost QA teams 50+ hours per release cycle.
- Technical Implementation: I architected and built 'Selvenza' a novel automation tool using Puppeteer, Node.js, and TypeScript. It programmatically extracts and compares thousands of UI selectors before and after each deployment, generating precise diff logs and creating the logic for automatic replacement in test scripts.
- Result: I transformed a 50+ hour manual engineering task into a single command. This tool eliminates the primary cause of UI test flakiness, drastically accelerating release cycles and saving significant QA resources.

TECHNICAL SKILLS

- Generative AI & LLMs: Multi-Agent Systems (LangGraph), RAG Pipelines, LLMs (GPT-4, Llama), Fine-Tuning, Transformer Models, LangChain, Prompt Engineering.
- Backend & Cloud : Oracle Cloud, AWS, GCP, Docker, Microservices, MQTT (Event-Driven), REST APIs, CI/CD.
- Data and DevOps : InfluxDB, Grafana, Git/Github, Power BI, SQL
- Machine Learning: Python, PyTorch, TensorFlow, Scikit-learn, Pandas, NumPy, Edge AI.
- Development & Automation: TypeScript, C++, Puppeteer, WebdriverIO, Streamlit, FastAPI

EDUCATION

Pandit Deendayal Energy University Nov 2022 - May 2026
Bachelor of Technology - Information and Communication Technology ***(CPI: 8.77)*** India

CERTIFICATIONS & ACHIEVEMENTS (Link)

- Generative AI & Machine Learning: Oracle Certified Generative AI Professional, AWS Certified Machine Learning – Specialty, Google Advanced GenAI, IBM Machine Learning (Honors), Deep Learning Specialization (DeepLearning.AI).
- Cloud & Data Analytics: AWS Certified Solutions Architect – Associate, Microsoft Power BI Data Analyst, Cisco Data Analytics Essentials.
- Professional Development: McKinsey Forward Program, Imperial College London (Science Communication), PMI Project Management Essentials.

Key Achievements:

Leadership: Ranked Top 1% of 35,000+ candidates in the PepsiCo Sales Star program for strategic problem-solving.

Thought Leadership: Achieved 200,000+ LinkedIn impressions by publishing technical content on AI/ML trends.
